

Climate change and gas emissions

Climate change - Definition

- Climate change is the change of temperature over a period of time in a region

Climate change – Weather vs Climate

Weather-short time of a period

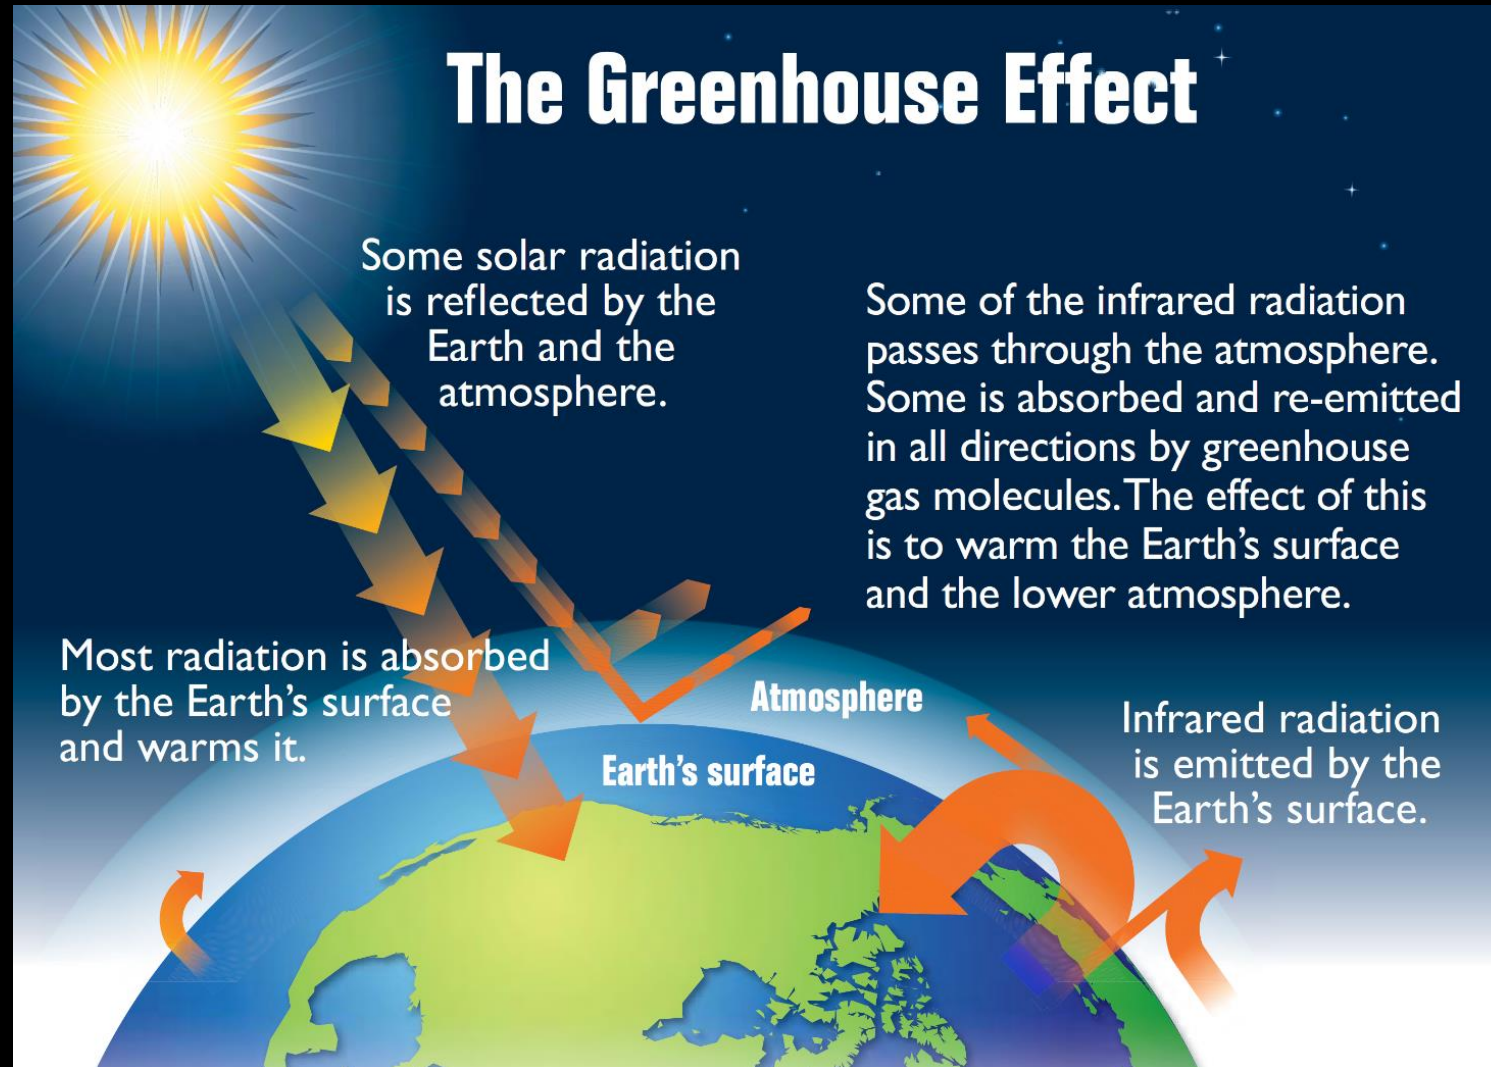

Measured

the air bubbles
inside the antarctic ice

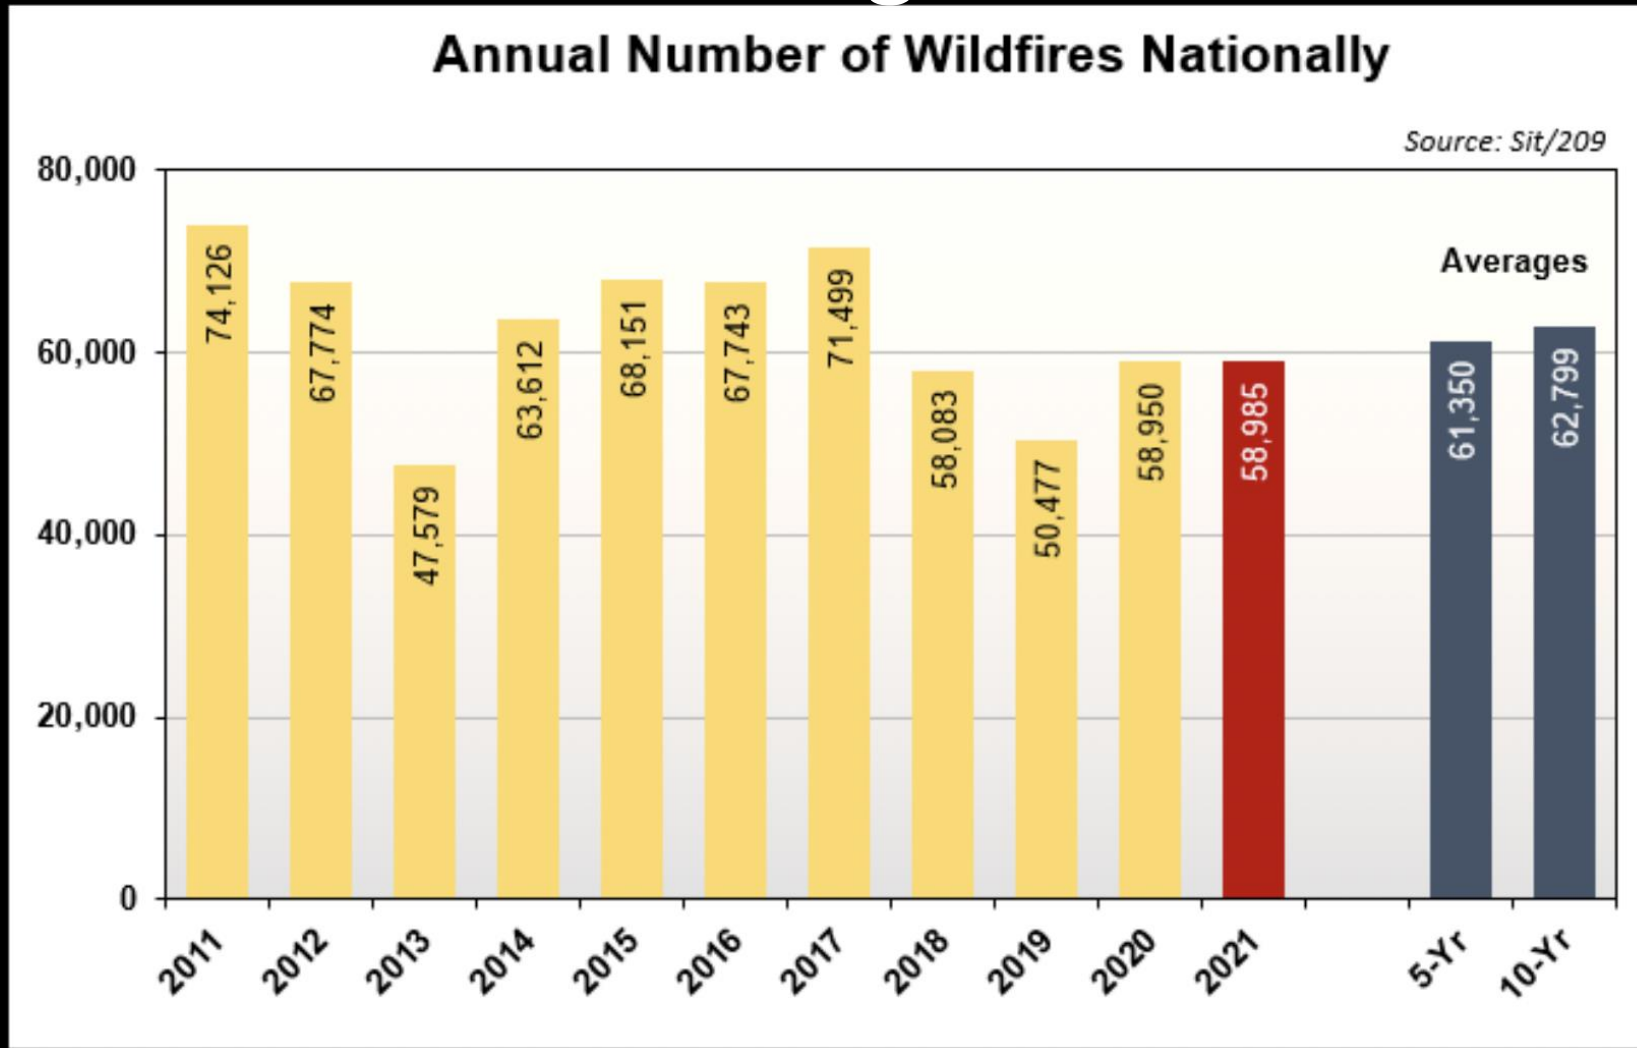

Climate-long
Past climates can be

by measuring

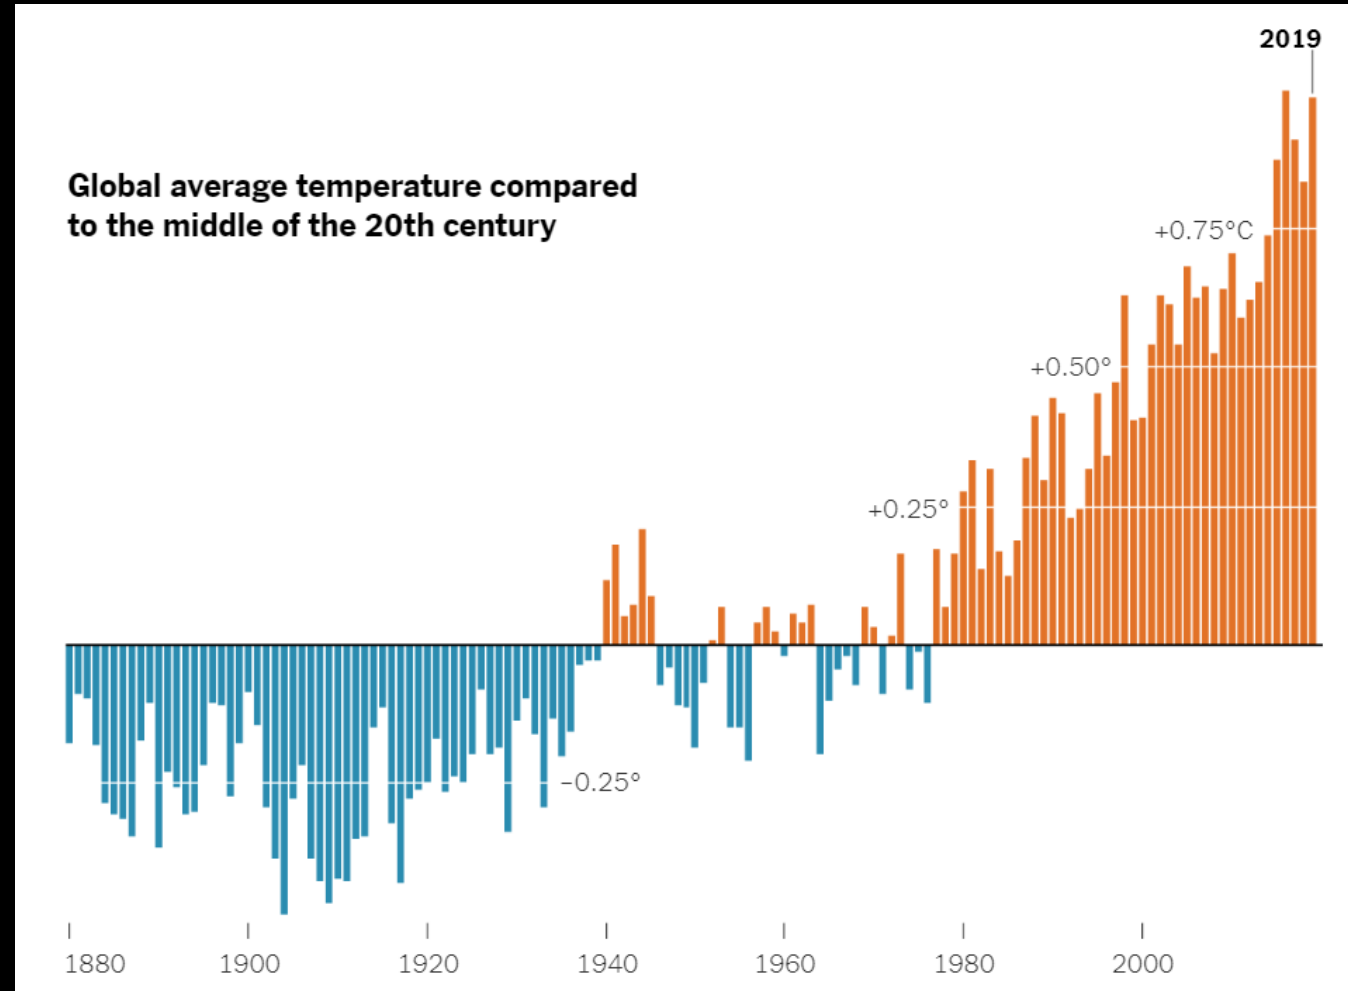

What is the reason of climate change?

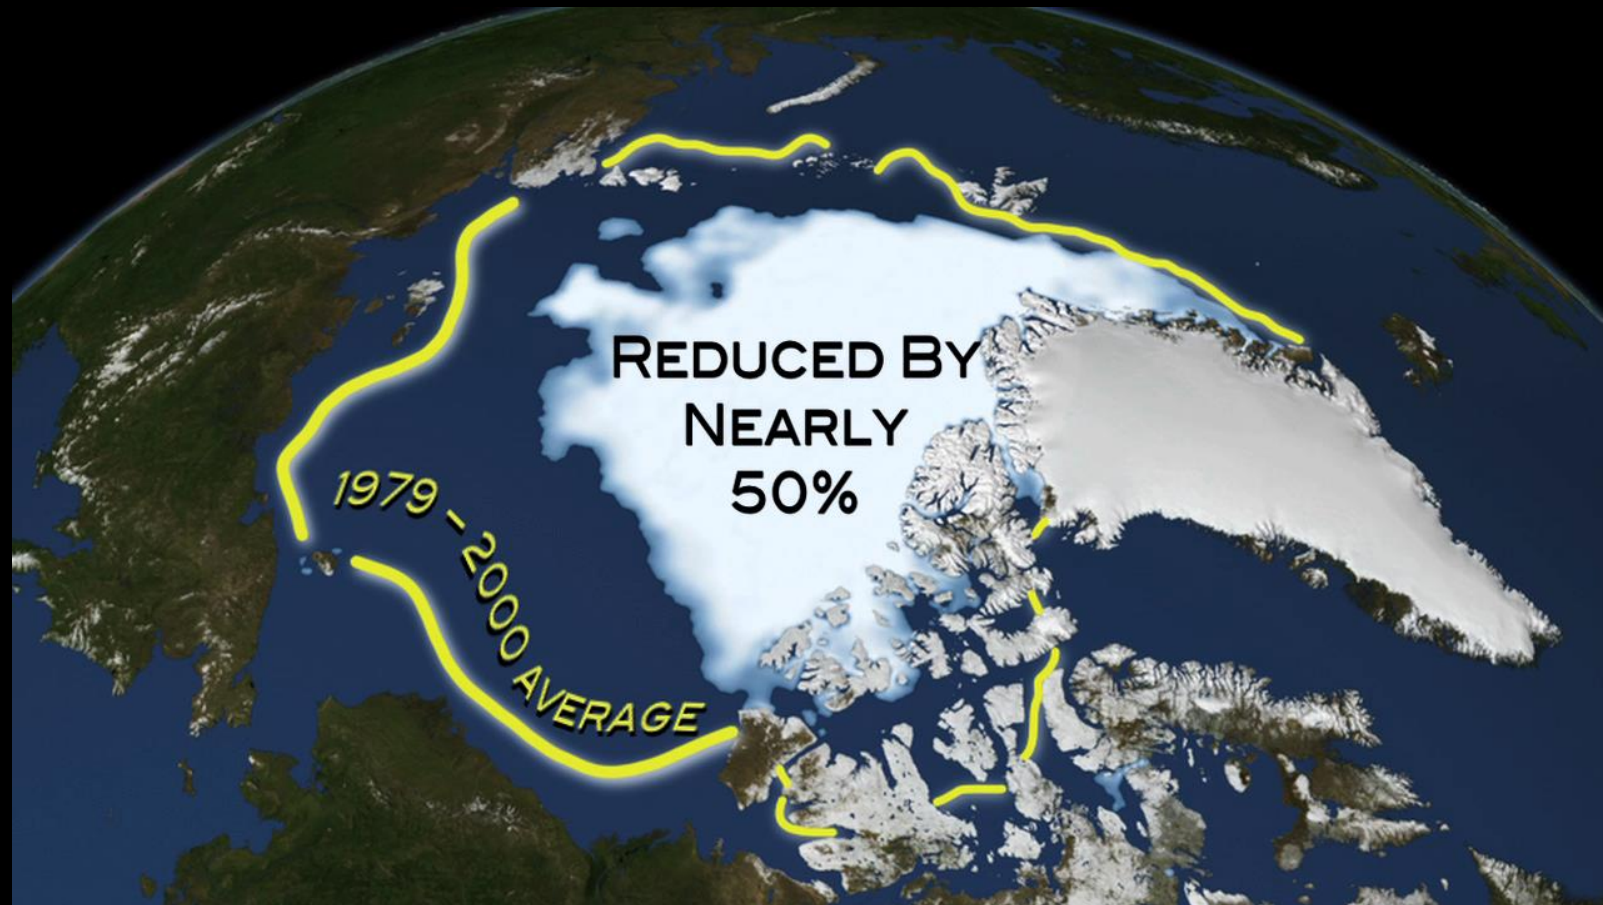

What are the consequences of climate change?

What are the consequences of climate change?

What are the consequences of climate change?

Conclusions:

- The impacts of climate change on different sectors of society are interrelated. Experts believe there is still time to avoid the most negative of outcomes by limiting global warming and reducing emissions to zero as quickly as possible. Reducing them will require investment in new technology and infrastructure, which will spur job growth. Additionally, lowering emissions will lessen harmful impacts to health, saving countless lives, both human and animal.
